System Requirement

Project Sponsor: Pornmook Wasthong

Business Need:

This grocery store's project is to increase sales by create online shopping services and Multiple methods of payment such as mobile banking, QR code prompt pay, and True Wallet. In order to make it more convenient for customers to shop for our products.

Business Requirement:

1. [ระบบแสดง] Show the list of products that still available, unavailable.
2. [ระบบค้นหา] System that can search the product and sort the product filter by keyword
3. [ระบบแสดง] Show the list of products in the cart with the price of each product and the summary price.
4. [ระบบจ่ายเงิน] Have an online payment method not only cash. Ex. Mobile banking. Prompt Pay, True money Wallet
Customer can scan QR code or use the account number [Banking] or phone number [Prompt pay, True money]
5. Calculate the payment amount of the product [Checkout].
6. [ระบบสร้าง] Generate QR code for payment with the exact summary price for customer. [So Customer don't have to insert price]
7. [ระบบสร้าง] Generate a receipt.
8. [ระบบบัญชี] Register and Login Account.

Business Value:

By allowing customers to place online orders, we hope to increase sales. convenient for customers who don't have time to go shopping outside and there are other payment options like online payment method besides cash available.

Conservative estimates of tangible value to the company include the following:

350,000 THB For Customer who ordering online.

150,000 THB For Customer who shopping by visit store.

Special Issues or Constraints:

Search Ability: To search a product with good performance without any delay, slow, issue is up to the design system

Training Employee and Use System: Training Employee to use of the system can be difficult Because each person is knowledge is different and We are unsure of how much time to spend training each person. Employee and Customers will need to understand how to use the system, or it can cause slow process.

Assinge Values to Costs and Benefits

Developing The Schedule

Functional And Non-Functional Q and A

FUNCTION REQUIREMENT

System Must be able to do, have :

Shows the list of products and Show products that are still available or unavailable in store.

Use product search and filtering system in order to quickly find the products.

Can view cart that display with each product's price and the total price of all products.

Keep Customer, Employee information.

Send Receipt Information to Customer through Email , SMS.

Paid With Cash, Mobile banking. Prompt Pay, True money using QR code or Phone number.

Login and Register Account System.

Employee and Customer must register an account. And login in first Then Customer can buy a product at our store in online.

Owner can create , view , remove account.

Employee can updated , restock , checkstock , create new item , create , view , remove account.

Customer can view item , find item , create or cancel order.

NON-FUNCTION REQUIREMENT

Usability

This system looks simple has a seasonal color and user friendly .

Compatibility

This system can be able to use the website on both desktop and mobile devices.

Performance

This system have 70 users per day.

Avaliability

The system service time 06:00 - 21:00 hrs in every day.

Testability

Some customer and employee will be testing the system.

Reliability

If the system fails, then recover the data.

Security

The system timeout when there is no action from the user within 30 minutes.

Functional Q&A

1. Q: Would you like to have a "product search and filtering system" for customers to use?

A: Absolutely, because it can help customers quickly find the products they need using keywords and filters without manually scrolling through the entire product list. Ask:Owner

2. Q: Would you like to have a "cart display with each product's price and the total price of all products" for customers?

A: Yes, so that customers can view each product that they choose, the number of products, the price of each item, and the total price of the product in the cart. Ask:Owner

3. Q: Would you like to have a "receipt generation system" for both online and at shopfront?

A: Of course, at the shopfront, A receipt that has various details. The list of products purchased, price of each item, total payment amount, receipt number, receipt time, and online part are the same, with additional payment methods displayed on the customer's device, such as by phone, SMS, or email. Ask:Owner

4.Q Would you like to have a system that "shows the list of products that are still available or unavailable" to be displayed on an online website store?

A: There should be one, so there is not an ordering problem with orders that do not have products. because if there is a system showing that the product is not ready, the customer cannot choose, but if the product is ready, they can choose.

Ask:Owner

5. Q: Do you want to keep employee information? Ask:Owner

A: I need data of employee to be kept for at least six months in case an employee causes a problem. So we'll have employee information ready.

Non-functional Q&A

1.Q: What do you want to design for the online website. Ask:Owner

A: We want the website to look simpl, have a seasonal color and be easy for customers to use. It should be easy to find products and use the search bar for shopping.

2. Q: Want customers to be able to use the website on both desktop and mobile devices? Ask:Owner

A: Yes, we want the website works well on computers and phones.

3. Q: What payment methods do you want your customers to be able to pay for? Ask:Owner

A:We want customers to have a lot of access such as Cash, Bank Applications, True Wallets, and QR Code Prompt Pay. (Usability)

4. Q: Can customers easily track their past orders and payment history? Ask:Owner

A: Yes, customers can easily see their previous orders and payment history.

5. Q: Who can use this website? Ask:Owner

A: Customer can view store and buy items, Employee can view store and confirm orders, and Owner can view customer and employee report.

6.Q How many users do you want the system to support in one day? Ask:Owner

A: I want system to be able to support about 100 users per day.

7. Q What time do you want the system to be used?

A: I want system service time 06:00 - 21:00 hrs in every day.

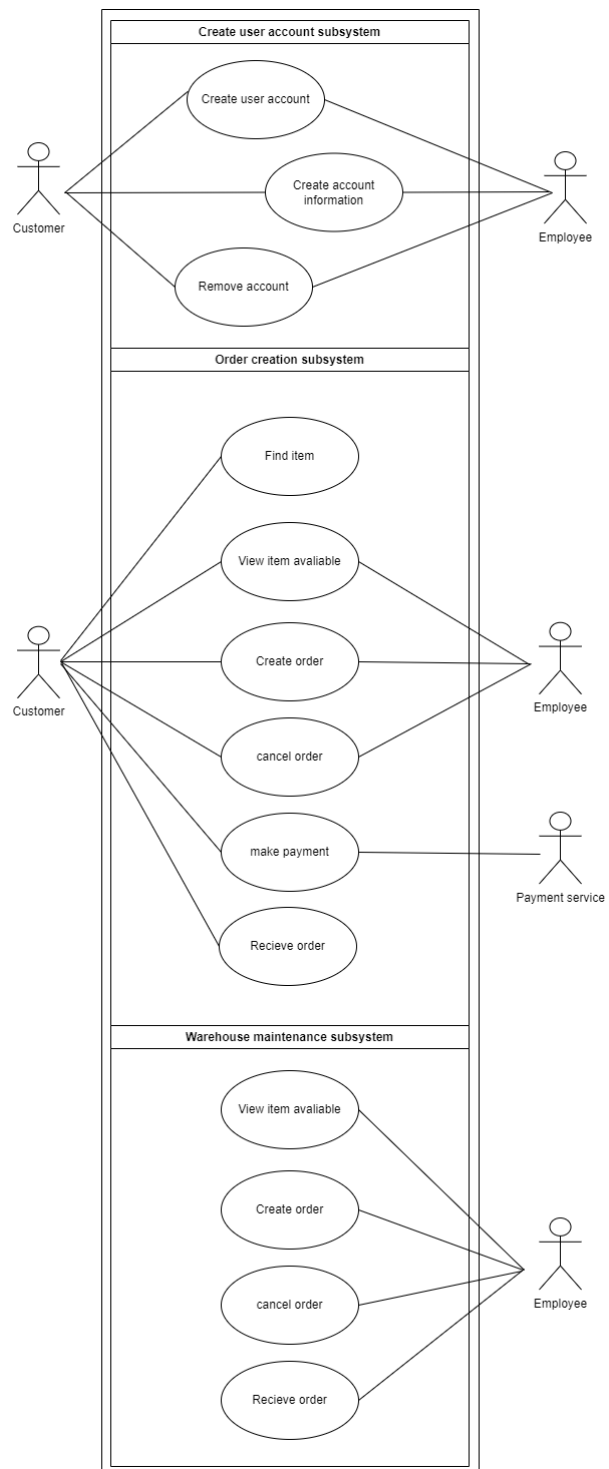

8. Q Who can test the system?

A: I need some customer and employee can testing the system.

9. Q Want to be reminded to log into the new system after a few minutes of no interaction from the user?

A: I want timeout when there is no action from the user within 30 minutes.

Use case diagram

Use case description

Create user account

Use Case Name:	Create user account
Scenario:	Customer creates account
Triggering Event:	Customer entry website
Brief Description:	Customer creates new account when they use the website for the first time.
Actors:	Customer
Related Use Cases:	-
Stakeholder:	Customer
Preconditions:	Customer must not have an account
Postconditions:	Customer use account login in to website.
Flow of Activities for scenario of customer creates account	
Main Flow: 1. Customer entry website. 2. Customer select create an account option. 3. System shows user registration pop-up. 4. Customer fill out registration form and submit (ex. Name, Surname, Phone number, and Email). 5. System save register info. 6. System display homepage.	
Exception Conditions:	

Use Case Name:	Create user account
Scenario:	Employee creates customer account
Triggering Event:	New customer creates telephone order
Brief Description:	Customer creates telephone order for the first time.
Actors:	Customer, Employee
Related Use Cases:	-
Stakeholder:	Customer
Preconditions:	Customer must not have an account
Postconditions:	Customer use account login in to website.
Flow of Activities for scenario of employee creates customer account	
Main Flow: 1. Customer contact to employee. 2. Employee ask customer that they want to create user account. 3. Employee entry website. 4. Employee login to website. 5. Employee select create an account. 6. System shows user registration pop-up. 7. Employee fill out customer information on website (ex. Name, Surname, and Phone number). 8. System save register info. 9. System display homepage.	
Exception Conditions:	

View account information

Use Case Name:	View account information
Scenario:	Customer view their account information
Triggering Event:	Customer need to know their information on website
Brief Description:	Customer entry customer information page to view, edit, or remove their information.
Actors:	Customer
Related Use Cases:	Create user account
Stakeholder:	Customer
Preconditions:	Customer must have an account
Postconditions:	Customer know their information on the website and the Customer's information has been edited or removed.
Flow of Activities for scenario of Customer view account information	
Main Flow: 1. Customer entry website 2. Customer select login option 3. System show login form. 4. Customer fill username and password. 5. System check for validation. 6. System display homepage. 7. Customer select customer profile page and information. 8. System display customer info page. 9. Customer can edit or remove their information. 10. System updated info.	
Exception Conditions: 2. Customer must have an account.	

Use Case Name:	View account information
Scenario:	Employee view their account, customer, or owner information
Triggering Event:	Employee need to know their information or customer information
Brief Description:	Employee need to view, edit, or remove their information
Actors:	Employee
Related Use Cases:	Create user account
Stakeholder:	Employee and Customer
Preconditions:	User must have employee's account.
Postconditions:	Employee know their information on website, their information has been edited or removed, Employee know customer's information, and Customer's information has been edited or removed.
Flow of Activities for scenario of Employee view account information	
Main Flow:	
1. Employee entry website 2. Employee select login option 3. System show login form. 4. Employee fill username and password. 5. System check for validation. 6. System display homepage. 7. Employee can select customer or employee profile and information. 8. System display customer/employee info page. 9. Employee can edit or remove customer/employee information. 10. System updated info.	
Exception Conditions:	
2. Employee must have an account. 9. Employee must not do anything with customer information without their permission.	

Remove account

Use Case Name:	Remove account
Scenario:	Customer remove their account
Triggering Event:	Customer don't want the store to keep their information.
Brief Description:	Customer don't want the store to keep their information and remove their account from the website
Actors:	Customer
Related Use Cases:	Create user account
Stakeholder:	Customer
Preconditions:	Customer must have an account
Postconditions:	Customer's account has been removed
Flow of Activities for scenario of Customer remove account	
Main Flow: 1. Customer entry website 2. Customer select login option 3. System show login form. 4. Customer fill username and password. 5. System check for validation. 6. System display homepage. 7. Customer select customer profile page and information. 8. System display customer info page. 9. Customer select remove account. 10. Customer confirm to remove their account 11. System will remove customer account in 30 days	
Exception Conditions: 10. Customer can cancel remove account if they did it by accident.	

Use Case Name:	Remove account
Scenario:	Employee removes customer account
Triggering Event:	Customer didn't use account for at least 9 months
Brief Description:	Employee removes customer account when Customer didn't use account for 9 months
Actors:	Employee and customer
Related Use Cases:	Create user account
Stakeholder:	Employee
Preconditions:	Customer didn't use the account for at least 9 month.
Postconditions:	Customer account has been remove.
Flow of Activities for scenario of Owner remove account	
Main Flow:	
1. Employee entry website 2. Employee select login option 3. System show login form. 4. Employee fill username and password. 5. System check for validation. 6. System display homepage. 7. Employee can select customer profile and information. 8. System display customer info page. 9. Employee remove customer account. 10. Employee confirm to remove Customer account. 11. System will remove Customer account in 30 days.	
Exception Conditions:	
2. Employee must have an account.	

Find item

Use Case Name:	Find item
Scenario:	Customer find item on website
Triggering Event:	Customer use the search bar
Brief Description:	Customer want item that don't show on the home page.
Actors:	Customer
Related Use Cases:	-
Stakeholder:	Customer
Preconditions:	Customer don't see the item that they want
Postconditions:	Customer found item that they want
Flow of Activities for scenario of Customer find item	
Main Flow:	
1. Customer open website. 2. Customer tap the search bar. 3. Customer type item name in the search bar. 4. Customer search for item.	
Exception Conditions:	
4a. System can't show the item that Customer misspell. 4b. System can't show the item that don't sell in store.	

View item available

Use Case Name:	View item available
Scenario:	Customer view item available
Triggering Event:	Customer click to view item information
Brief Description:	Customer view item available before add item to cart.
Actors:	Customer
Related Use Cases:	Update item available
Stakeholder:	Customer
Preconditions:	Customer need to view item information
Postconditions:	If there's an item available customer can add an item to cart
Flow of Activities for scenario of Customer view item available	
Main Flow: 1. Customer found item that they want. 2. Customer tap the search bar. 3. Customer type item name in the search bar. 4. Customer searches for items . 5. Customer click items to expand item information.	
Exception Conditions: 4a. System can't show the item that Customer misspelled. 4b. System can't show the item that doesn't sell in the store.	

Use Case Name:	View item available
Scenario:	Employee view item available
Triggering Event:	Employee click to view item information
Brief Description:	Employee view item available before order new item to the store
Actors:	Employee
Related Use Cases:	Update item available
Stakeholder:	Employee
Preconditions:	Employee need to view item information
Postconditions:	If there isn't an item available Employee fill the item
Flow of Activities for scenario of Employee view item available	
Main Flow: 1. Employee receive notification that item out of stock or report from Customer that they don't receive some item. 2. Employee view item information including to item available. 3. Employee fill items in stock. 4. Employee update item available.	
Exception Conditions: 4a. If the system shows the wrong item available, Employee needs to update the correct information. 4b. If an item is already out of stock, Employee need to fill the warehouse.	

Create order

Use Case Name:	Create order
Scenario:	Customer create online order
Triggering Event:	Customer confirm their order
Brief Description:	Customer add item to cart and confirm order
Actors:	Customer
Related Use Cases:	View item available
Stakeholder:	Customer
Preconditions:	Item must already exist
Postconditions:	The store receive a customer order
Flow of Activities for scenario of Customer create online order	
Main Flow: 1. Customer opens the website and then links to the order page. 2. The system starts a new order and display items. 3. Customer add items to cart. 4. When a customer finds the correct item, requests it be added to the order; The system adds it to the shopping cart. 5. Customer repeats steps 3 and 4. 6. Customer requests end of order; System display a summary of the ordered items. 7. Customer makes any changes. 8. Customer requests payment screen; System displays payment screen. 8a. Customers enter payment information; System displays summary information and sends confirmation. 9. System finalizes order.	
Exception Conditions: 4. If there's an item in cart but not confirm order the store won't receive order. 8a. If Customer payment is rejected due credit verification, then a. Customer can cancel the order. b. Order is put on hold until check is received.	

Use Case Name:	Create order
Scenario:	Employee create telephone order
Triggering Event:	Customer confirm their order
Brief Description:	Customer call to Employee and tell them want they want
Actors:	Customer and Employee
Related Use Cases:	View item available
Stakeholder:	Customer and Employee
Preconditions:	Item must already exist
Postconditions:	The store receive a customer order
Flow of Activities for scenario of Employee create telephone order	
Main Flow:	
1. Customer calls the Employee and gets an order. 2. employee enter customer information. 3. employee starts creation of a new order. 4. Customer requests an item be added to the order. 5. Employee checks the item available and adds it to the order. 6. Repeat steps 4 and 5 until all items are added to the order. 7. Customer indicates end of order, Employee enters end of order; System summary of the order item. 8. Customer submit payment; Employee enters amount; System verifies payment. 9. system finalizes order.	
Exception Conditions:	
5. If an item is not in stock, then customer can a. choose not to purchase item b. request item be added as a back-ordered item 8. If Customer payment is rejected due credit verification, then a. Customer can cancel the order. b. Order is put on hold until check is received.	

Cancel order

Use Case Name:	Cancel order
Scenario:	Customer cancel online order
Triggering Event:	Customer decides to cancel the order they have created.
Brief Description:	Customer cancel order when they don't get items that they want
Actors:	Customer
Related Use Cases:	Create order
Stakeholder:	Customer
Preconditions:	-
Postconditions:	Order must exist in the system, customer must exist in the system.
Flow of Activities for scenario of Customer cancel online order	
Main Flow: 1. Customer clicks on "cancel order." 2. Customer enters order id. 3. If the customer decides not to cancel the order they hit "abort" and displays a message "Order not cancelled." 4. If the customer decides to cancel the order, he selects "cancel order" system cancels the order by setting the order status to "cancelled" 5. Customer enters the reason for cancelling.	
Exception Conditions: 2.1 Order or customer not found.	

Use Case Name:	Cancel order
Scenario:	Employee create telephone order
Triggering Event:	Customer decides to cancel the order they have created.
Brief Description:	Customer cancel order when they don't get items that they want
Actors:	Customer and Employee
Related Use Cases:	Create order
Stakeholder:	Customer
Preconditions:	-
Postconditions:	Order must exist in the store,
Flow of Activities for scenario of Customer cancel telephone order	
Main Flow:	
1. Customer calls to cancel an order with employee. 2. Employee ask customer information and order id 3. Customer tells the information and order id. 4. Employee asks customer to confirm the cancellation of the order. 5. If customer say "not cancel order" employee prepare order. 6. If customer say "cancel order" employee cancels order. 7. employee update order, quantity	
Exception Conditions:	
3.1 Order not found.	

Make payment

Use Case Name:	Make payment
Scenario:	Customer make payment
Triggering Event:	Customer need to pay for their order
Brief Description:	Customer pay for their order after confirm order
Actors:	Customer
Related Use Cases:	Create order, Create user account
Stakeholder:	Customer
Preconditions:	Customer created order
Postconditions:	The store will prepare Customer order
Flow of Activities for scenario of Customer make payment	
Main Flow: 1. Customer confirm their order 2. Customer make payment by using method that they register in account creation step. 3. Customer confirm purchase. 4. Employee prepare order	
Exception Conditions: 2. If in account creation step Customer don't add payment method, Customer need to fill out their payment method before confirm purchase.	

Receive order

Use Case Name:	Receive order
Scenario:	Customer receive order
Triggering Event:	Customer come to the store and show order receipt to the Employee and take their order
Brief Description:	Customer come to the store and show order receipt to the Employee and take their order
Actors:	Customer
Related Use Cases:	Create order and Make payment
Stakeholder:	Customer
Preconditions:	Employee prepare order
Postconditions:	Customer receive item
Flow of Activities for scenario of Customer receive order	
Main Flow:	
1. Customer come to the store 2. Customer show receipt to Employee 3. Employee give order to Customer 4. Customer receive order from Employee	
Exception Conditions:	
4. Customer can reject order if get wrong item or doesn't get all item.	

Check stock

Use Case Name:	Check stock
Scenario:	Employee check stock
Triggering Event:	Employee need to know number of items in warehouse
Brief Description:	Employee view number of items in warehouse before order new items
Actors:	Employee
Related Use Cases:	View items available
Stakeholder:	Employee
Preconditions:	Employee need to know number of items in warehouse
Postconditions:	Employee order the correct items to fill the warehouse
Flow of Activities for scenario of Employee check stock	
Main Flow:	
1. System notices that the item is out of stock. 2. Employee check stock before order new items. 3. Employee order new items to fill warehouse.	
Exception Conditions:	
1. Employee can check the stock every time that they want to know the number of items.	

Create new item

Use Case Name:	Create new item
Scenario:	Employee create new item
Triggering Event:	Employee create new item on website
Brief Description:	Employee create new item on website and customer can buy new item
Actors:	Employee
Related Use Cases:	-
Stakeholder:	Employee
Preconditions:	The store sells new items
Postconditions:	Customer can buy new item on website
Flow of Activities for scenario of Employee create new item	
Main Flow:	
1. The store order new product to sell in the store. 2. Employee add new item to the website. 3. Customer can find and add new items to cart.	
Exception Conditions:	
2. Employee don't need to create new items if they used to sell that item before.	

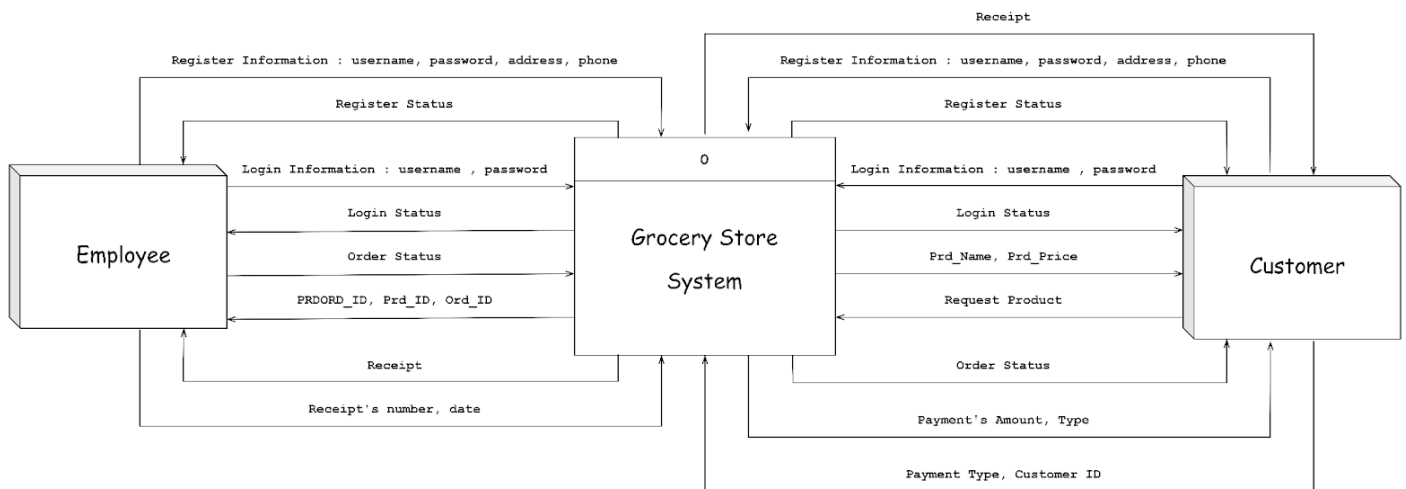

Update available item

Use Case Name:	Update available item
Scenario:	Employee update available item
Triggering Event:	Item information is updated or the number of items on the website is inconsistency with the warehouse
Brief Description:	Employee update item available when the number of items is inconsistency with the warehouse or item information is updated.
Actors:	Employee
Related Use Cases:	View available item
Stakeholder:	Employee
Preconditions:	The number of items is inconsistency with the warehouse or item information is updated.
Postconditions:	The number of items is correct.
Flow of Activities for scenario of Employee update available items	
Main Flow:	
1. Employee found that item available is incorrect. 2. Employee update the number of item available. 3. Employee found that items information is updated. 4. Employee update items information.	
Exception Conditions:	
2. Employee don't need to update number of item if it is correct. 4. Employee don't need to update items information if it's not has any update.	

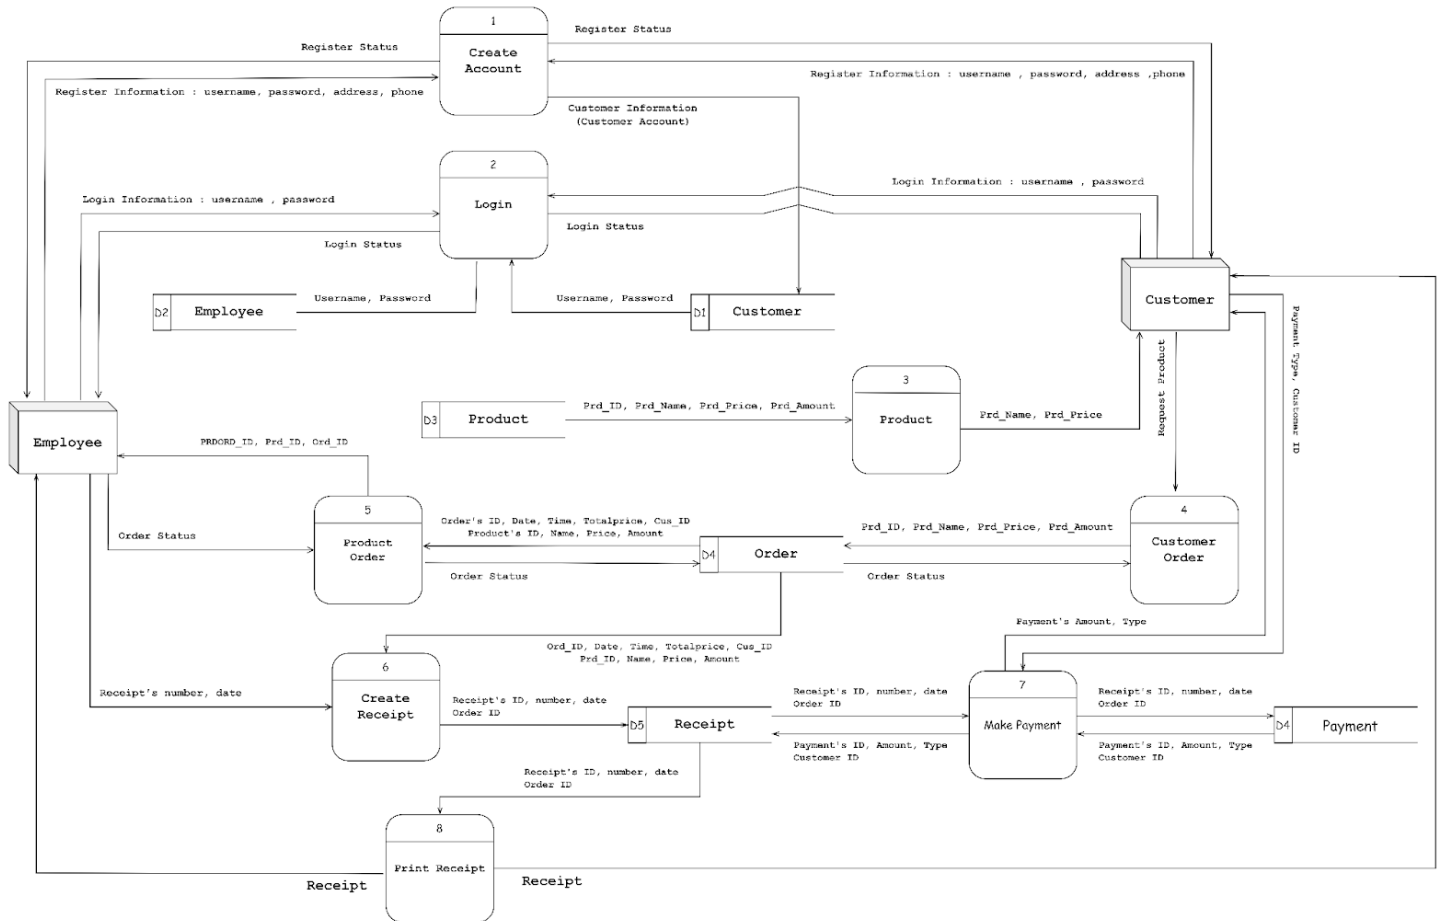

Restock items on shelf

Use Case Name:	Restock items on shelf
Scenario:	Employee restock items on shelf
Triggering Event:	Employee check shelf stock and found that item is out of stock
Brief Description:	Employee check shelf stock and found that item is out of stock. Employee must restock items on shelf
Actors:	Employee
Related Use Cases:	View available item
Stakeholder:	Employee
Preconditions:	Shelf items is out of stock
Postconditions:	Shelf items is available
Flow of Activities for scenario of Employee restock items on self	
Main Flow:	
1. Employee check shelf stock and found that item is out of stock. 2. Employee check warehouse stock. 3. Employee fill shelf stock with the warehouse stock.	
Exception Conditions:	
2. If warehouse runs out of stock, Employee need to order items to fill the warehouse first.

Pornmook Wasthong

The screenshot shows a web browser window with the title 'Grocery store'. The address bar contains 'Search Google or type a URL'. The browser's toolbar includes back, forward, refresh, and search icons, as well as star, extension, and menu icons. The page header features a hamburger menu icon on the left, the 'grocery store' logo in the center, and the user's name 'Pornmook Wasthong' with a profile picture on the right. The main content area is titled 'CREATE NEW ITEM'. On the left, there is a large image placeholder with a blue sky, a white cloud, and green hills, with the text 'Upload photos' in the center. Below this placeholder are two smaller icons: one showing the same landscape and another with a plus sign. To the right of the image placeholder are five input fields: 'Product ID', 'Product name', 'Product price' (which includes a currency selector dropdown set to a Thai Baht symbol), 'Stock', and 'Product description' (a larger text area). At the bottom right of the form is a dark 'Create item' button.
